

The perfect starting point for all Joomla lovers

The screenshot shows the Joomla! administrator interface. At the top, the 'Current Style' is set to 'Purity II - Default'. Below this, the 'MegaMenu' dropdown menu is highlighted with a green box. A red arrow points from this box to the 'MegaMenu Configuration' panel at the bottom. In this panel, the 'Enable Megamenu' option is set to 'OFF'. A green text box with a red border contains the text: 'If you disable Megamenu in a template style, it will use default Joomla! menu'.

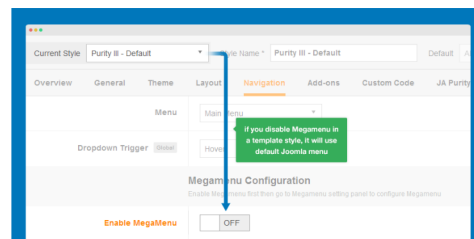

Enable Megamenu

Open the template style that you want to enable Megamenu, go to **Navigation** tab then enable the Megamenu option.

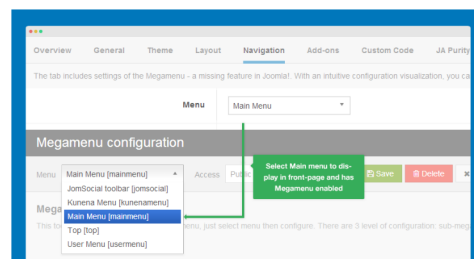

Configure Megamenu

Megamenu configuration is a global setting so it's the same for all template styles. On the top of template style, hit the **Megamenu** button.

Select menu to be displayed in front-page

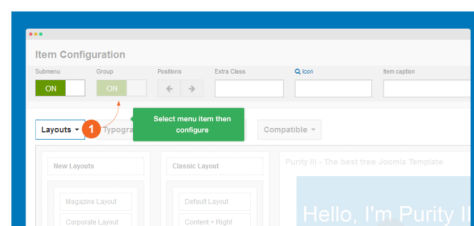

You can select any menu to configure for Megamenu. But it's not the menu to be displayed in your front-page. The menu to be displayed in your front-page is the menu you assign in the Template style setting, under the Navigation tab.

Megamenu configuration level

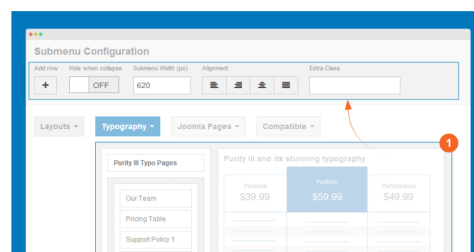

There are 3 configurations level in Megamenu: Menu item, column and sub-menu

Menu item configuration

The menu item setting allows you to enable/disable its sub-menu, add extra class to style the menu item, add icon and caption for the menu item.

Sub-menu configuration

The screenshot shows the Joomla! administrator interface. At the top, there's a navigation bar with 'Joomla!' and '3.9.15' labels. Below it, the 'Column Configuration' dialog box is open. The dialog has four tabs: 'Layouts', 'Typography', 'Joomla Pages', and 'Compatible'. The 'Typography' tab is selected. In the 'Typography' tab, there's a 'Extra Class' dropdown menu. A red arrow points from this dropdown to a red circle with the number '1' on the right side of the image. The background shows a Joomla! page layout with a sidebar containing links like 'Our Team', 'Pricing Table', 'Support Policy 1', and 'Support Policy 2'. The main content area displays a pricing table with columns for 'Product', 'Price', and 'Performance'.

The screenshot shows the Joomla! administrator interface. At the top, there are navigation tabs: 'Layouts', 'Typography', 'Joomla Pages', and 'Compatible'. The 'Layouts' tab is active. Below it, there is a 'New Layouts' button and a dropdown menu showing 'Classic Layout'. To the right, a green callout box with a white arrow points to the 'Layouts' tab, containing the text 'Default menu is drop down menu'. Below the 'Layouts' tab, a dropdown menu is open, displaying a list of layout options: 'Magazine Layout', 'Corporate Layout', 'Portfolio Layout', 'Blog Layout', 'Features Intro 1', 'Features Intro 2', and 'Glossary Layout'.

The screenshot shows the Joomla! Submenu Configuration interface. The 'Submenu Name' field is highlighted with a red circle and the number 2. The 'Add' button is highlighted with a red circle and the number 1. A green callout box points to the 'Add' button with the text 'Select sub-menu then change its size'.

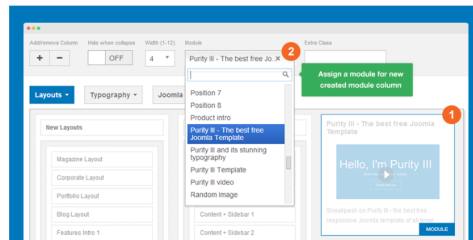

Step 4: Create new module column

To create new module column, select "Classic layout" column then hit "+" button on the configuration bar.

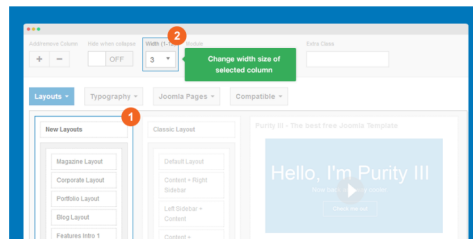

No assign content - any module for the new created column module.

Step 5: Change column size

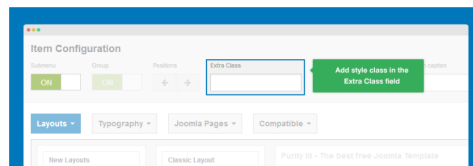

You can change the width size of each column to adjust your Megamenu based on the content displayed. On Purity III demo, the size of each column is 3-3-6.

Style, icon and item caption in Megamenu

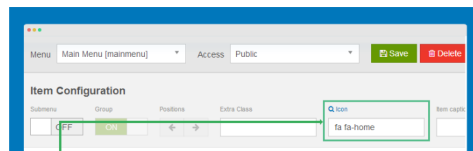

Style Megamenu

You can style for Megamenu from menu item, sub-menu and column by adding style class to the field **Extra Class**. On Purity III demo, we don't use any extra class.

Add icon for menu item

You can add icon for any menu item in your Megamenu. It can be default Bootstrap 3 icons, Font Awesome 3 icons or your own styled ones. Select the menu item you want to add icon then paste the icon class to the **Icon** field.

Bootstrap 3 icon (<http://getbootstrap.com/components/#glyphicons>)

Font Awesome 3 icon (<http://fontawesome.github.io/Font-Awesome/icons/>)

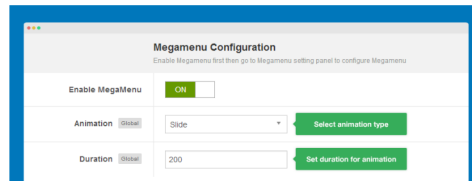

Add caption for menu item

Purity III doesn't have style for menu caption by default. Yet you can still customize your desired style for Megamenu.

Configure effect/animation for Megamenu

Megamenu supports a number of animation types. To configure this feature, open any template style, go to **Navigation** tab then select your animation type and duration.

References:

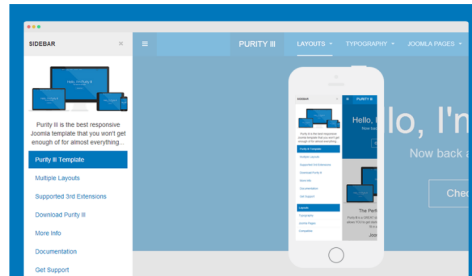

With Purity III, you can build a multilingual site with multi-language Megamenu and multi instance Megamenu. Just refer to the T3 framework documentation below.

Multilingual docs (<http://t3-framework.org/documentation/bs3-customization#multiple-language>)

Multi instance docs (<http://t3-framework.org/documentation/bs3-customization#multi-instance-megamenu>)

Off-canvas sidebar

The first idea of Off-canvas is for mobile menu system, but now it's much more flexible. Off-canvas is considered as a position so that you can add any content to it apart from menu. You can also select to enable/disable it in specific layouts.

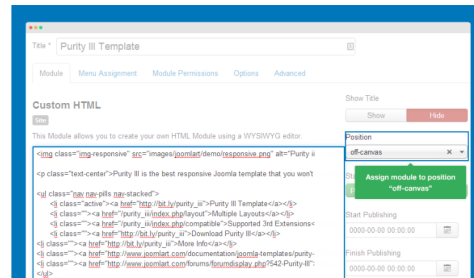

How to add content to Off-canvas sidebar?

All default layouts in Purity III includes Off-canvas position by default. You can check by opening any layout.

The content in **Off-canvas sidebar** is from the modules assigned to the position **off-canvas**. So if you want to add content to Off-canvas sidebar, just put the content to a module then assign that module to position **off-canvas**.

You can set Off-canvas sidebar to get content from any position. In the layout configuration panel, assign Off-canvas sidebar to the position you want it to get content from.

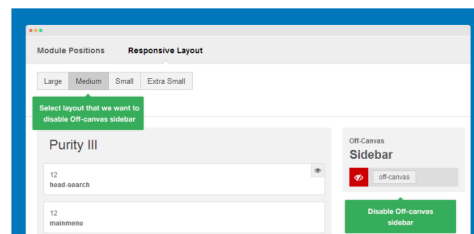

How to use Off-canvas as Main menu on mobile?

Off-canvas sidebar can be used as your main menu on mobile through the 3 steps below.

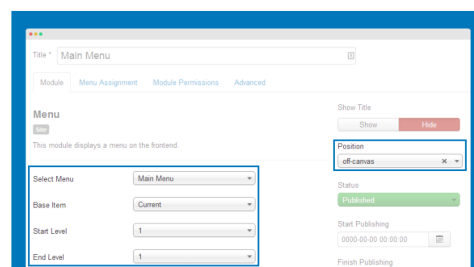

Step 1: Disable Off-canvas sidebar in all responsive layouts except mobile.

To use Off-canvas sidebar as mobile menu system, we should enable it in mobile layout only. Go to template style, then select **Layout >> Responsive layout >> Extra Small** layout.

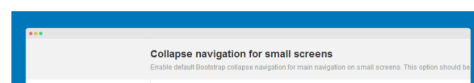

Step 2: Create menu module

Create menu module then assign to position **off-canvas**.

Step 3: Disable default Bootstrap navigation on small screens

If you don't disable the default Bootstrap navigation on small screens, you will have 2 menu systems on mobile layout.

How to disable Off-canvas sidebar

Disable Off-canvas sidebar in any layout

Off-canvas sidebar position is included in all layouts by default. There are 2 ways to disable/remove this in any layout.

#1: In layout back-end

Open the template style with layout you want to disable Off-canvas sidebar then assign it to "none".

#2: In header.php file.

Open `header.php` file in `templates/purity_iii/tpls/blocks` then find the following code:

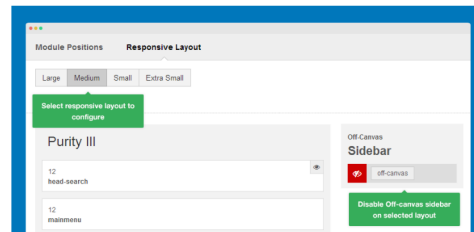

```
1. <!-- OFF-CANVAS -->
2. <?php if ($this->getParam('addon_offcanvas_enable')
3.     <?php $this->loadBlock ('off-canvas') ?>
4.     <?php endif ?>
5. <!-- //OFF-CANVAS -->
```

What you need to do is remove this part:

```
1. <?php $this->loadBlock ('off-canvas') ?>
```

Disable Off-canvas sidebar in any responsive layout

Purity III is the responsive template that support multiple responsive layouts. You can enable/disable Off-canvas sidebar in any responsive layout by selecting the responsive layout to configure then disable off-canvas sidebar on selected layout.

How to move Off-canvas sidebar to right side

By default, Off-canvas sidebar is located in left side but it is possible to move it to the right side.

Step 1: Move sidebar to the right side

Open `of-canvas.php` file in `templates/purity_iii/tpls/blocks`, find the code:

```
data-pos="left"
```

Change it to:

```
data-pos="right"
```

Step 2: Move button to the right side

Open `off-canvas.less` file in `templates/purity_iii/less`, find the following style:

Joomla Templates (/www.joomlart.com/demo/#jts) | Joomla! Themes (/www.joomlart.com/demo/#jnts) | JA Wall (/www.joomlart.com/demo/#ja_wall)

```

2. //
3. .off-canvas-toggle {
4.   border-radius: 0;
5.   border: 0;
6.   background: transparent;
7.   color: @navbar-default-color;
8.   padding: 0;
9.   width: @navbar-height;
10.  height: @navbar-height;
11.  line-height: @navbar-height;
12.  position: absolute;
13.  top: 0;
14.  left: 0;
15.  // States
16.  &:hover, &:active, &:focus {
17.    outline: none;

```

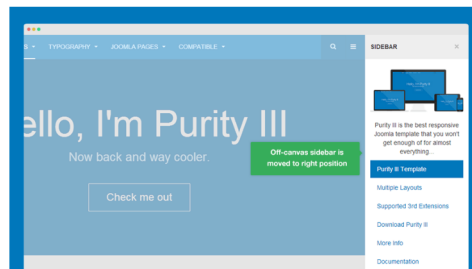

Replace the code:

```
left: 0;
```

with:

```
right: 0;
```

Front-end Appearance

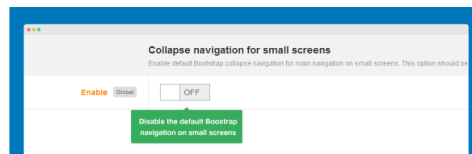

The style of Off-canvas sidebar is also included in the `off-canvas.less` file. Therefore, if you want to customize the style, just use this file.

Default Bootstrap navigation

Purity III integrates Bootstrap at core. Therefore it also supports default Bootstrap navigation on small screens like mobile.

To enable/disable default Bootstrap navigation on small screens, open the template style you want to enable/disable default bootstrap navigation then go to **Navigation** tab. Slide between the button On/Off.

The front-page would look like this when Bootstrap navigation on small screens is enabled.
