

## **Abstract**

This is a sample document that tests the use of entries in sectioning commands through commands like `\glsfmtshort` and `\glsfmttext`.

# Contents

<b>1</b>	<b>Sample Chapter with HTML Abbreviation</b>	<b>2</b>
<b>2</b>	<b>Another Sample Chapter with HTML Abbreviation</b>	<b>4</b>
	<b>Glossary</b>	<b>6</b>

## Chapter 1

# Sample Chapter with HTML Abbreviation

First use: [hypertext markup language \(HTML\)](#). Next use: **HTML**. Note that the [sample](#) entry that occurs at the start of the chapter title appears in lower case in the PDF bookmarks, since the case-changing command can't be used there.

Page break to test header.

## Chapter 2

# Another Sample Chapter with HTML Abbreviation

The case-changing commands can't be used in PDF bookmarks, so this chapter has used `\texorpdfstring` to provide an alternative for the PDF bookmark. The first chapter ([Sample Chapter with HTML Abbreviation](#)) didn't do this so "Sample" appeared in lower case in the PDF bookmark.

*CHAPTER 2. ANOTHER SAMPLE CHAPTER WITH HTML ABBREVIATION*<sup>5</sup>
