

# Deployment

- 1.** Put one of your examples from the “Syntax and Utilities II” (or earlier topic) into a JAR file. Make sure it runs automatically when you do “java -jar”.
- 2.** Execute it from a .bat file. Put the .bat file on the desktop and give it a keyboard shortcut.
- 3.** Launch my Phisher2 application from an applet.
- 4.** Run any of your earlier examples via Java WebStart.
